

## Panorama Hilite® – Protecting a Gold Mine

When the owners of an 18th century-inspired architectural home designed 2,000 French window panes into their plan, they knew they would need to protect their living space from the sun’s damaging rays. The spacious and impeccably decorated home – all 38,000 square feet of it – is filled with precious antique furniture, original artwork, an in-home theater and gold leaf crown molding accents. Though beautiful, light passing through the windows would expose their home’s interior to fading and produce undesired glare and heat pockets if the windows were unprotected.

Official Panorama window film dealer David Oetzel of Sun Control Specialists was called to develop a solution. Based on more than 20 years experience, David recommended Panorama Hilite solar control window film for its optically clear design that blocks 95% of uncomfortable heat and prevents 99% of the sun’s damaging ultraviolet (UV) light. With Panorama window film, this stunning home would be kept cool and comfortable, and furnishings would be protected.

“The best solution to overcoming the sun’s negative impact is solar control window film,” commented official dealer David Oetzel. “Panorama Hilite is invisible and yet the benefits are experienced year-round and year after year.”

David and his team retrofitted approximately 2,500 square feet of Panorama Hilite to the custom windows. The result? Complete assurance to the homeowners that their furnishings and gold accents would be protected from fading, a reduction of heat pockets, and beautiful views, inside and out.

“To achieve elegance and sophistication, the homeowner incorporated decorative painting and gold leaf crown molding in every possible design aspect. Therefore, we collaborated with Sun Control Specialists to install Panorama window film because of its proven protection, reduction of hot spots, and the fact that the film is made up of precious metals including gold, which the owners loved!” commented Michael J. Rabena of The Malvern Development Group.

### Installation Summary

Building Name	Private residence
Location	Philadelphia, PA suburb
Problems	Fading interiors and furnishings Excessive heat
Solution	Panorama Hilite
Amount of Film Installed	Approximately 2,500 square feet
Benefits Experienced	Protects against premature fading of furnishings, artwork and gold accents Eliminates hot spots Maintains aesthetic appearance of home
